A NOTE OF WHITE

In the present collection white dominates. And when, before now, has the work of the ceramist, in this pure yet ever variable mantle of sunlight, been offered in such consistent variety? Here is a variformity comprehending East and West, and motives of diverse origin, united only in artistic expression. And that expression itself is diverse—as the peoples represented. England is linked with Italy and with France, Italy with the Near East, Iran with Cathay; all in plastic white.

The English salt glaze productions are such as are not frequently seen in New York; in fact they will be largely a revelation, of their kind. These articles have not been exhibited by Mr. Clarke, who began to acquire them some years ago, and to stow them decoratively in his home and conceal them quietly, but not to show them in cases in his art house.

It is perhaps not too much to say that just as years earlier the same owner practically started the cult of the Chinese "single colors" in this country, through the happy accident of noting that the dignity and beauty of those objects did not interfere with enjoyment of the collection of paintings which he was assiduously acquiring, so at a later day he awoke by accident or incidentally to the charm of the English salt glazes and the Leeds creams, as seen on the soft and rich surfaces of the mahogany and oak furniture that he was then collecting.

It was those and just such furnishings of Eighteenth Century England which the salt glaze dishes and ornaments originally decorated and served,—the sideboards and corner-cupboards, the tables and dressers, in the warm glow of mahogany or the soft patina enhancing the fine solidity of oak,—and they speak in the same tongue on this side the sea. In fact they bring Albion with them; note the teapot fashioned in the form in miniature of an Englishman's home.

In the open lattices and basketry of the dishes for table use and adornment, admirers see the Eighteenth Century Eng-

lishman's attempt to produce plastic ornament in concord with the designs found in his imported laces and damasks. Again he weaves openwork baskets, as the worker in whites, intertwining the stems of the grapevine and training its leaves for decoration. Fruit baskets, sugar bowls and creamers, tea caddies and cruet stands and sauce boats, epergnes, chestnut-bowls and hot-water plates bespeak the hospitable board, and plaques, jardinières and statuettes the more purely decorative aspirations of artificers who worked homogeneously rather than as imitators of the stranger.

From this sometimes delicate, sometimes crude, and generally robust craftsmanship, the eye passes to a French congener of the openwork threading, characteristically dainty in soft cream hue, and travels to the rich Italian white faience of the Sixteenth Century, sometimes with its color touches of almost primitive simplicity. Here is more familiar ground, though more distantly removed, and possibly the same might be said of the Persian pottery, which is included on the way to China.

And lastly the great and friendly empire of the Celestials proffers amid the white its unrivaled monochromes, both in white and color, the colors supplying the accents and harmonies and enriching the whole composition.

DANA H. CARROLL.
